## REASONS FOR ALLOWANCE

- The following is an examiner's statement of reasons for allowance: The present invention is directed towards a method and system of adaptive pixel correction of a multi-color matrix from a sensor. Each independent claim identifies the uniquely distinct feature "for generating plural vectors from a kernel, each vector having a particular pixel as a central element, normalizing values for nearest neighbor elements to the central element for each vector and determining an estimated value for the particular pixel based on the normalized values". The closest prior art, Shezaf et al. (USPN 6,832,009 B1) recite wherein image interpolation provides a simple method that can up-scale an image in various scale ratios, including fractional scaling ratios and can yield a sharp image with reduced unpleasant visual artifacts. An embodiment uses a power weight function that is gradient dependent and uses a function that has a linear dependence on the distance to compute interpolated pixels. A further embodiment uses a power that can be adapted according to the local contrast of edges; while Tan et al. (USPN 6,697,534 B1) recite method and apparatus for adaptively sharpening local image content of an image, either singularly or in combination, fail to anticipate or render the above underlined limitation obvious.

- Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
